SUMMARY

Senior Engineer & Tech Lead (~8 years experience) specializing in architecting distributed systems and event-driven microservices within **0→1 startup environments**. Proven track record of translating ambiguous requirements into concrete solutions while leading cross-functional teams and managing global stakeholder partnerships to deliver high-impact, business-critical systems.

SKILLS

- **Languages & Core Runtimes:** JavaScript (Node.js), TypeScript, Go, Python
- **Distributed Systems & Architecture:** Microservices, Event-Driven Architecture, System Design (HLD/LLD)
- **Frameworks & APIs:** GraphQL, RESTful APIs, React, Node.js
- **Databases (SQL/NoSQL):** PostgreSQL, MySQL, Cassandra, Elasticsearch, DynamoDB
- **Cloud & DevOps:** AWS, Serverless, Infrastructure as Code (IaC), CircleCI, CI/CD Pipelines
- **Messaging & Caching:** Kafka, RabbitMQ, Redis
- **Data Engineering & Analytics:** BigQuery, Snowflake, Clevertap, Heap
- **Engineering Leadership:** Technical Roadmap Planning, Mentorship, Agile/Scrum, Stakeholder Management

WORK EXPERIENCE

Senior Software Engineer

Eventbrite | Remote (Hyderabad, India)

Oct 2023- Present

- Led architecture and delivery of a multi-slot time selection system for recurring events, coordinating across 3 engineering teams, which **decreased checkout abandonment by ~3%** and contributed to **\$2M+ creator retention**.
- Designed a service to replace sequential service orchestration, reducing latency at scale, enabling SLA compliant, scalable checkout flows which **reduced the API latency by 70%**.
- Designed and deployed AI chatbot integration (Decagon.ai), which aims at **reducing support contact volume by ~60%** and it **improved customer satisfaction by ~30%**.
- Built trust signals and credibility badges using historical event data, which **increased conversion rate by ~4%** and boosted engagement.
- Architected a high-throughput feedback and rating system for scalable event and organizer insights.
- Led migration from monolithic systems to AWS-based microservices for improved scalability, reliability, and fault tolerance.
- Improved deployment velocity by implementing zero-downtime **CI/CD pipelines** (CircleCI) for faster, safer releases.
- Authored **unit, end-to-end, and smoke tests** for critical workflows, which improved release confidence and reduced regressions.
- Partnered with product, design, and global stakeholders (US & Spain) to align roadmaps and deliver high-impact features.

Staff Software Engineer (Backend Lead)

Byjus Exam Prep (Formerly Gradeup) | Noida, India

Jun 2018 - Oct 2023

- **Led backend engineering for core platform, managing 10 engineers (5 direct reports)** across multiple squads and driving sprint execution and roadmap delivery.
- **Owned end-to-end architecture and development** for payments, access control, course/test modules, and internal tools, partnering with product teams to translate requirements into scalable solutions.
- **Led migration from one-time purchase to subscription-based model**, handling legacy user transitions, **increased ARPU by ~40%**.
- **Built and scaled payment infrastructure** integrating Razorpay, PayU, and Paytm, including automated refund and access revocation workflows.
- **Designed a flexible discounting platform** supporting coupons, installment plans, and dynamic pricing → improved monetization and conversion.
- **Architected event-driven systems using AWS Lambda and Kafka** for user activity-triggered workflows, notifications, and engagement pipelines.
- **Built scalable notification systems and data pipelines** integrating with BigQuery, Clevertap, and third-party tools for analytics and user engagement.
- Optimized system performance, **reducing Redis CPU utilization by ~30%** through architectural improvements.
- Revamped search functionality, **improving click-through rate from 40% to 76%**, and redesigned key user flows driving ~30% increase in engagement.
- Led integration of Test Series platform into the main system and implemented core platform capabilities including RBAC and bulk operations.
- Developed admin platforms and internal tools end-to-end during early product phase using Node.js and React.

OTHER INFORMATION

- Won **BritelIndia Impact Award (Q2 2025)** for leading and delivering a high impact project.
- Won 1st prize in an internal 24-hour hackathon for a game "Smash"; successfully **launched the game to production within 3 days** of winning.
- **B.Tech in Computer Science:** JSS Academy of Technical Education, Noida (2014–2018)
